Table top Model

With cup denester and lidder

Fully automatic cup packaging line

# MODEL DPF-6000

## Volumetric Dry Products Filler

The model DPF is a very simple method to accurately dispense free flowing dry materials into containers at speeds of up to 50 fills per minute, depending on the product and size of the fill. The operator loads product into the hopper, places a container under the nozzle, presses a foot pedal or palm button, product is then dispensed into the container. The DPF-6000 is available in different models with a variety of fill ranges from .1 oz. to 1 gallon. Fill volumes Accuracy of fill is  $\pm \frac{1}{2}$  of 1% by volume.

The standard model includes a product hopper and product contact parts are stainless steel and food grade plastics. All parts disassemble quickly for clean up. The unit requires compressed air (4 cfm @ 80 psi). Options include: floor stands, larger hoppers, vibrators, product agitators, interchangeable nozzles and multiple nozzle units.

### HOW IT WORKS

Volume adjustment hand wheel

DPF-6000 Micro for small volume fills

Agitator in hopper keeps product from bridging
